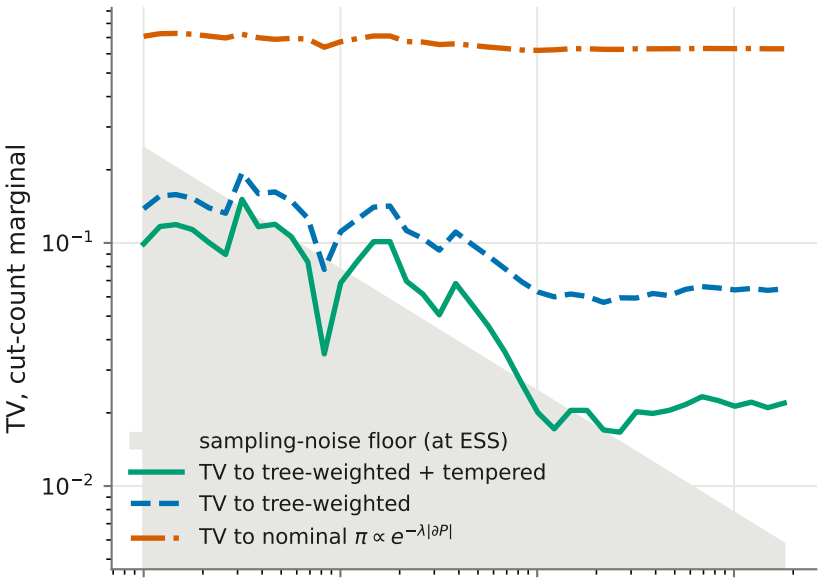
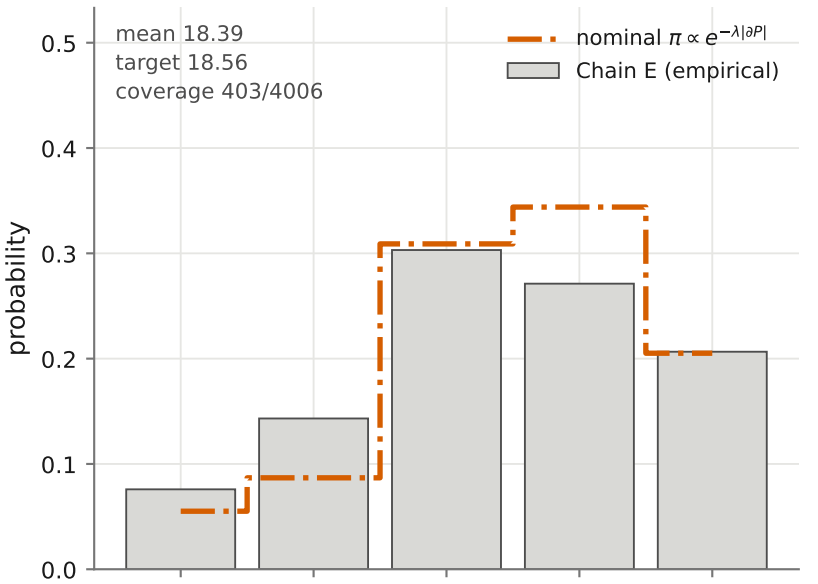
(a) Tempered ReCom misses its nominal target
mean 16.73
tree+tempered 16.78
nominal 18.56
tree-weighted + tempered
tree-weighted
nominal $\pi \propto e^{-\lambda|\partial P|}$
Chain A (empirical)
probability
cut edges



(b) One distance plateaus, the other does not
TV, cut-count marginal
sampling-noise floor (at ESS)
TV to tree-weighted + tempered
TV to tree-weighted
TV to nominal $\pi \propto e^{-\lambda|\partial P|}$
steps used (post burn-in)



(c) The exact chain against its own target
mean 18.39
target 18.56
coverage 403/4006
nominal $\pi \propto e^{-\lambda|\partial P|}$
Chain E (empirical)
probability
cut edges
